MATTHEW ARTHUR ELLIOTT

AI EVALUATION & HUMAN RATING | DOCUMENT & LANGUAGE QUALITY | APPLIED AI DEVELOPMENT
Cary, NC | 919-428-5660 | matthewaelliott@hotmail.com | matthewelliott.me

PROFESSIONAL SUMMARY

AI data evaluator and human rater on production LLM evaluation and data-generation programs through TELUS Digital AI and Appen. Current work centers on document-editing trajectory collection: editing documents to detailed reference, description and inference instructions, judging candidate reference documents, and rating the clarity of the instructions themselves. Honours BSc in Actuarial Science with SOA Exams P and FM passed, bringing disciplined verification habits to rubric-based judgment, hallucination detection and consistent rating across long batches. Also designs and ships production AI applications independently, and brings a lifelong writing practice to language and reasoning tasks.

CORE EVALUATION COMPETENCIES

- Model output evaluation
- Preference ranking
- Instruction-clarity rating
- Structured written rationale
- Rubric-based annotation
- Instruction-following analysis
- Document & formatting review
- Prompt authoring & rewriting
- Severity & policy tagging
- Hallucination detection
- Fact-checking & source verification
- Failure-mode documentation

AI EVALUATION & MODEL TRAINING EXPERIENCE

TELUS Digital AI / Appen — AI Data Evaluator & Human Rater *Remote | Jan 2026 – Present*

- Edit Word documents to precise reference, description and inference instructions on a human-editing trajectory collection program; judge candidate reference documents and rate whether each instruction is clear, ambiguous or under-specified.
- Evaluate AI-generated responses against versioned project guidelines for factual accuracy, logical consistency, relevance, completeness and instruction-following, sustaining accuracy across high-volume batches.
- Review documents as visual artifacts as well as text, confirming that layout, formatting, tables and embedded elements match what the instruction and the stated answer claim.
- Label hallucinations, unsupported conclusions, reasoning gaps and instruction-following failures, documenting each with written rationale tied to the governing guideline.
- Produce and rewrite training content (prompt authoring, response generation, paraphrasing and summarization) alongside preference ranking and category labeling.
- Flag ambiguous or defective prompts back to the program team rather than forcing a judgment, and verify claims through multi-source research.
- Passed qualification assessments across multiple enterprise AI data programs, including TELUS Digital AI, Appen and DataAnnotation.

SkyStarter Creative LLC — Founder & AI Tool Developer *Remote | May 2019 – Present*

- Founded and operate SkyStarter Creative LLC, an independent digital and creative business, handling research, budgeting, scheduling, deployment and documentation from concept through production.
- Designed, built and deployed three live AI web applications end to end using coding agents (Claude Code, Cursor) and LLM APIs, covering prompt architecture, structured JSON output, front-end build and Vercel deployment:
  - **SkyJourn** — reflective journaling and decision support (skyjournapi-ai.vercel.app)
  - **SellScript** — e-commerce listing optimizer with before-and-after scoring (sellscript.vercel.app)
  - **ClosedWon** — context-aware sales follow-up generator (closedwon-ruby.vercel.app)
- Built SellScript around an explicit scoring rubric with annotated explanations, applying rubric design to generated content rather than only consuming rubrics.
- Refined prompts and workflows through iterative output evaluation: comparing generations side by side, scoring quality and documenting recurring failure modes across releases.

MUSIC, WEB3 & WRITING

Evaflow — Independent Recording Artist & Songwriter *Independent | 2019 – Present*

- Lyric and topline writing across reggae, dancehall and hip hop; one independently released album with full ownership of masters, with hands-on writing, vocals, arrangement and production.
- Writing continuously since 1996, including five years of sustained long-form journal writing (several hundred entries); working fluency in Jamaican Patois and Caribbean English registers.
- Built a combined social audience of 45,000+ across TikTok, Instagram, YouTube and Facebook.

Evaflow — Smart Contract Developer & Music NFT Artist *Ethereum & Solana | 2021 – 2025*

- Released five music NFT collections of about 50 pieces each on Ethereum and Solana, and every one sold out; wrote and deployed the custom smart contracts, including ERC-721A on Ethereum.
- Implemented ERC-6551 token-bound accounts on the final collection, allowing each NFT to own and hold other NFTs.
- Released through a custom mint site and across OpenSea, Manifold, Glass, Sound.xyz and Exchange.art, building a base of loyal repeat collectors.

ANALYTICAL & DOCUMENT REVIEW EXPERIENCE

Mercer Canada (Marsh McLennan) — Health & Benefits Analyst *London, ON | 2012*

- Cross-referenced benefit policy documents and handbook editions against prior-year versions across multiple client accounts, identifying discrepancies and material changes in health, dental and pharmacy provisions.
- Performed claims experience analysis and maintained Excel reporting and pricing-support models for renewal and plan cost review.
- Produced client-facing documentation within a 4–6 person consulting team under formal peer-review, quality-control and client-confidentiality standards.

Midac Equipment (Drilling & Blasting) — Site Administrative Coordinator *Jamaica*

- Designed Excel tracking systems for fuel use, equipment activity, labor hours, productivity and materials cost, reconciling data with a small team to reduce reporting errors.

EDUCATION & PROFESSIONAL EXAMINATIONS

University of Western Ontario — Honours Bachelor of Science, Actuarial Science *London, ON | 2011*

- Society of Actuaries Exam P (Probability): Passed. Exam FM (Financial Mathematics): Passed.
- Coursework: Probability Theory, Regression Analysis, Time Series Analysis, Loss Models, Survival Analysis, Life Contingencies, Financial Mathematics and Economics.

SKILLS & AVAILABILITY

- **Evaluation:** rubric application and design, side-by-side output comparison, preference ranking, severity and policy tagging, hallucination detection, instruction-clarity rating, prompt testing and QA.
- **Technical:** coding-agent development (Claude Code, Cursor), JavaScript/TypeScript, React and Next.js, REST APIs, JSON schema design, Git, Vercel; Solidity smart contracts (ERC-721A, ERC-6551); Ethereum and Solana NFT deployment; R; Microsoft Word, Excel and PowerPoint.
- **Communication:** native English speaker; Valedictorian; multiple Best Speaker awards, including the Optimist International Oratorical Competition; international student representative for Jamaica.
- **Availability:** US work authorized, remote contractor; dedicated home workspace and high-speed internet; reliable async availability of 20+ hours per week.
